

# LaCie d2 DVD±RW Drive with LightScribe

FireWire

## Professional 20x DVD Drive

### LightScribe Disc Labeling

LightScribe is an innovative technology that allows you to burn silkscreen-quality labels directly onto CDs and DVDs with a laser instead of a printer. LightScribe uses a combination of your CD or DVD drive, specially coated discs, and enhanced disc-burning software to produce precise, professional labels. The result is an impressive iridescent image composed of art, text, or photos of your own creation.

### Custom DVDs in Minutes

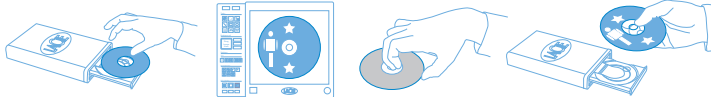

The LaCie d2 DVD±RW Drive features the fastest DVD record speed on the market in a sturdy design. Record professional-quality, personalized DVDs with the included authoring software for Mac. Import video and audio footage from your DV camcorder and burn projects onto DVD discs. Completed DVDs can then be played back on virtually any DVD player.

### Compile Music, Photo & Video Discs

Back up valuable data, share photos, and archive MP3 libraries and MPEG-2 DVD video. With the ability to store digital data on CD or DVD media, the LaCie d2 DVD±RW Drive allows you to burn up to 8.5GB or more than two hours of theater-quality video on large-capacity DVD. This rewritable drive features FireWire for easy connection to your Mac.

### Multiple CD/DVD Labeling

When volume production of professional looking discs is required—for a corporate meeting or a sales presentation, for example—LaCie DVD±RW Drives provide a simple and cost-effective solution. The useful LaCie LightScribe Labeler software lets you simultaneously print labels on an unlimited number of LaCie LightScribe drives, chained together on a Mac. The management of printing queues is highly simplified by a user-friendly Mac interface.
